EDUCATION

University of Wollongong

Bachelor of Science in Computer Science (Honours)

Expected graduation year: 2028

CGPA: 3.89

SKILLS

Programming Languages: Python, Java, C++, JavaScript, TypeScript, HTML, CSS, SQL, Visual Basic

Frameworks: FastAPI, Node.js, React, Flask

Developer Tools: Git, Linux, PostgreSQL, MongoDB, LocalStack, AWS, Terraform, Docker, GitHub Actions

Certifications: AWS Certified Solutions Architect – Associate, IBM Data Engineering Specialization, Machine Learning Specialization

WORK EXPERIENCE

Tuition Teacher (Part-Time) | Incept Learning Centre, Desa Pandan

Jan 2025 - June 2026

- Taught ESL English, Additional Mathematics, General Science, Physics, Chemistry and Biology to students aged 7–16 following IGCSE and SPM syllabi.

Freelance Python Developer (Contract) | Coway New Era

Oct 2025 - Feb 2026

- Engineered a secure automation tool using Python (Tkinter) to orchestrate data extraction from the Coway Partner portal, reducing manual report generation time by over 90% (2 hours to <10 minutes).
- Developed session persistence logic to manage user authentication via automated cookie retrieval and manual entry, ensuring secure and continuous API/web access.
- Built a dynamic filtering engine allowing users to customize date ranges and data parameters before programmatically exporting validated customer info to Excel.

PROJECTS

[Driftwatch](#) | ECS Fargate, DynamoDB, SNS, ECR, FastAPI, Terraform, GitHub Actions

- Built an automated drift detection platform that continuously reconciles live AWS infrastructure against Terraform state across 5 resource types, surfacing misconfigurations within 6 hours via SNS alerts
- Deployed end-to-end using self-referential IaC, Terraform + GitHub Actions provisions
- CI pipeline uses GitHub Actions OIDC → pytest (147 tests) → Docker build → ECR push → ECS redeploy on every merge

[Cloud Job Runner Platform](#) | EKS, Lambda, SQS, Fargate, ECR

- Built an event-driven job platform on AWS where API Gateway → SQS → Lambda → EKS Fargate workers process containerised tasks end-to-end
- Ensured zero message loss via SQS long-polling, delete-on-success pattern, Dead Letter Queue with 3-retry limit
- Reduced idle compute cost using KEDA autoscaling, scaling worker pods 0–10 replicas based on live queue depth
- Added CloudWatch alarms and log metric filters to monitor queue depth and job failure rates in production

[ShiftMate](#) | FastAPI, React, PostgreSQL, Resend, Docker, Vercel, Render, Neon | [Live Demo](#)

- Built a full-stack volunteer shift scheduler for nonprofits, zero-friction signup flow (name + email only, no accounts) with token-based admin auth, real-time capacity enforcement, and CSV export
- Engineered confirmation email pipeline using Resend + icalendar, attaching .ics calendar invites on every signup so volunteers can add shifts to Google/Apple Calendar in one click

EXPERIENCE IN COMPETITIONS

Gold Award, Malaysian Computing Challenge

2024

Finalist, National Secondary School Programming Contest (NSSPC)

2024
